# RECOMMENDED FINISHES

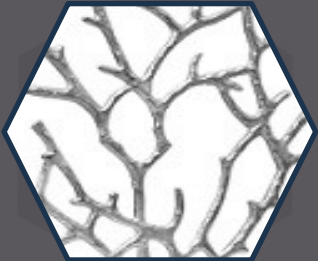

FINISH TYPE	REMARKS
Anodized Finish	Generally anodized finish is not recommended, Cast Aluminium Components tend to exhibit less favorable anodization qualities due to their inclination toward porosity.
Chrome Plating & Electroplating	Electroplating is typically used on steel or iron substrates while chrome plating is applied to Aluminium and Brass substrates. The chrome plating is applied over bright nickel plating. Typical base materials include steel, Aluminium, plastic, copper alloys and zinc alloys.
Powder Coating	Powder coating is a great choice for making Aluminium products more durable and aesthetically appealing. Powder coating is economical to apply and offers a similar range of color options.

# ADVANTAGES OF PROPOSED METAL CASTING

Artisan Glass  
Creativity & elegance  
to your space

Aluminium Casting exhibits a high degree of Adaptability to align with the majority of architectural design objectives

# ADVANTAGES OF PROPOSED METAL CASTING

## METAL CASTING :

Utilizing aluminum casting as a decorative element guarantees the potential for three-dimensional designs, with high strength offers flexibility, and reduces material wastage.

## RECYCLABILITY :

Aluminum stands as one of the foremost recycled materials today, boasting remarkable recyclability. An aluminum beverage can, an aluminum door, or a window frame can frequently be reprocessed into the same aluminum product.

## DESIGN FLEXIBILITY :

The Aluminum Castings are crafted with an ideal fusion of innovation and technology, aligning seamlessly with the interior design concept.

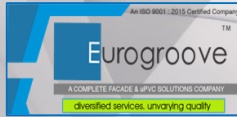

## MAINTENANCE :

The aluminum decorative panel in double glazed unit remains shielded against challenging weather conditions, ensuring its longevity and necessitating virtually no maintenance to uphold its aesthetic appeal.
